- System shall prevent the deletion of Docs categories that linked to one or more document (that defined from screen "document setup' screen).
- The selected sector is used only to filter the available departments.
- The docs category shall be associated with the selected department and job hierarchy only.
- No direct relationship shall be established between the docs' category and selected sector.

User stories:

(1) Create/ Define documents category

AS a System Administrator

Want to Create new Document category

So, Docs can be classified and managed correctly

Acceptance Criteria:

Arabic name is mandatory

(2) View documents category

AS a System Administrator

Want to retrieve an existing document category record

So, I can review or update document category data

Acceptance Criteria:

Clicking view, load the selected document category info.

English name is mandatory

Sector name is mandatory

job hierarchy name is mandatory

department values are filtered based on selected sector

Save the document category data after validation

Edit button enabled

(3) Edit documents category

AS a System Administrator

Want to Update an existing document category info

So, the document category data remains accurate and updated

Acceptance Criteria:

Users can modify the retrieved data

Update the document category data

(4) Delete documents category

AS a System Administrator

Want to Delete document category that is no longer needed

So, obsolete data is removed from system

Acceptance Criteria:

In case there are documents linked to selected doc. Category display error msg "يوجد وثائق مربوطة بهذا نوع الوثيقة"

In case there are NO documents linked to selected doc. Category display error msg "تم الحذف بنجاح"

(5) View documents category

AS a System Administrator

Want to view all defined docs categories in a sortable grid

So, I can easily find and manage docs categories records

Acceptance Criteria:

Grid displays all configured\ defined docs categories

User can sort the grid by clicking any column headers

Each row provide view and delete action

4.13 Checklists define:

Define checklist Screen:

Description: Screen to define and manage c that is used throughout the system.

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
Check code	Auto increment ID	Mandatory	Accept Arabic Alphabet only	
Check name	text	Mandatory	Accept Arabic and English Alphabet only	
Response type	Dropdown list	Mandatory	Multi-select	Yes – No – N/A
حفظ	Button	Fill and validates all mandatory fields	Save the Documents category data	
تعديل	Button	At least modify one of the editable fields	Update the Documents category data	
The grid (allows users to change the sorting order by clicking the grid headers) displays the defined checks				
Check code	Auto generated	-		

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
Check name	Auto generated	-		
عرض	Button	Enabled For each row	Retrieve and Display check data in the related fields and edit button	

Business /General rules:

- Screen Shall be accessible to authorized users (defined from user step (تعريف المستخدم) screen by select checkbox "مدير النظام')
- The grid displays all defined check.
- Users shall be able to sort the grid by clicking the column headers.
- View action shall be available for each record in the grid.

4.14 Status setup:

Defining Status Screen:

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
كود الحالة	Auto increment ID	-		
اسم الحالة	text	Mandatory	Accept Arabic Alphabet only	
حفظ	Button	Fill and validates all mandatory fields	Save the status data	
تعديل	Button	At least modify one of the editable fields	Update the status data	
The grid (allows users to change the sorting order by clicking the grid headers) displays the defined Status - default order earliest to oldest				
كود الحالة	Auto generated	-		
اسم الحالة	Auto generated	-		
عرض	Button	Enabled For each row	Display status data in the related fields and display edit button	

Business /General rules:

- Screen Shall be accessible to authorized users (defined from user step (تعريف المستخدم) screen by select checkbox "مدير النظام')

- Define static Status.
  - Closed ticket/ تم إغلاق المشكلة(2)
  - Returned for rework/ معادة للمعالجة (3)
  - Closed from responsible / مغلقة من المسئول (4)

- Not planned / غير مدرج بخطة التدريب المعتمدة (5)

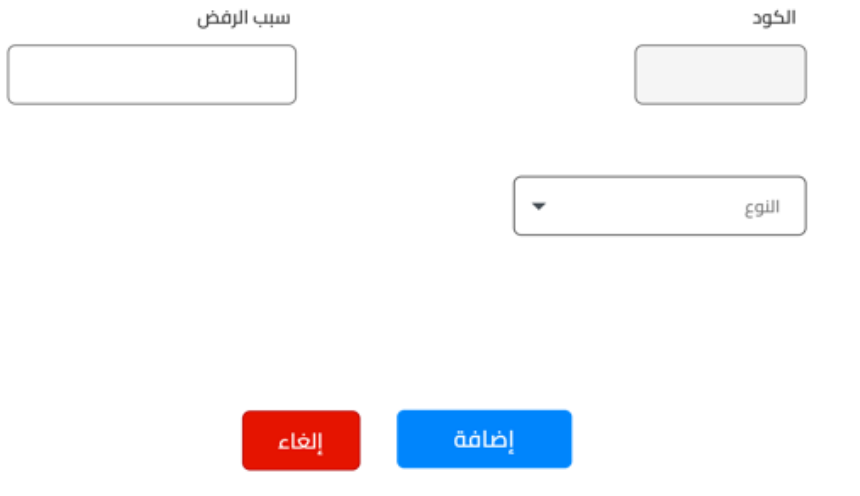

- The grid displays all defined statuses.
- Users shall be able to sort the grid by clicking the column headers.
- View action shall be available for each record in the grid.
- Users cannot delete status.

User stories:

(1) Create status AS a System Administrator Want to Create new sector So, I can maintain that the sector master data in the system Acceptance Criteria: Arabic name English name Inline validation messages Save the sector data after validation	(2) View status AS a System Administrator Want to retrieve a type of data So, I can review or update type data Acceptance Criteria: Clicking view, load the selected type data Edit button enabled
(3) Edit status AS a System Administrator Want to Update an existing sector info So, the master data remains accurate and updated Acceptance Criteria: Arabic name editable English name editable Update the type data	(5) View statuses AS a System Administrator Want to view all defined statuses in a sortable grid So, I can easily find and manage statuses records Acceptance Criteria: Grid displays all configured\ defined statuses User can sort the grid by clicking any column headers Each row provide view and delete action

4.15 Rejection reasons:

تعريف أسباب الرفض Screen:

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
كود سبب الرفض	Auto generated	-		Sequence Last defined one + 1
النوع	Dropdown list	Mandatory	Multi-select	
سبب الرفض	text	Mandatory	Accept Arabic Alphabet only	
حفظ	Button	Fill and validates all mandatory fields	Save the rejection reason data	
تعديل	Button	At least modify one of the editable fields	Update the rejection reason data	
The grid (allows users to change the sorting order by clicking the grid headers) displays the defined Types - default order earliest to oldest				
كود سبب الرفض	Auto generated	-		
سبب الرفض	Auto generated	-		
عرض	Button	Enabled For each row	Display category data in the related fields and display edit button	

Business /General rules:

- Screen Shall be accessible to authorized users (defined from user step (تعريف المستخدم) screen by select checkbox "مدير النظام')
- Duplicate rejection reason codes are not allowed.
- The grid displays all defined rejection reasons.
- Users shall be able to sort the grid by clicking the column headers.
- View actions shall be available for each record in the grid.

User stories:

(1) Create rejection reason

AS a System Administrator

Want to Create new rejection reason

So, I can maintain that the rejection reason master data in the system

Acceptance Criteria:

rejection reason name

Save the rejection reason data after validation

(2) View rejection reason

AS a System Administrator

Want to retrieve rejection reason data

So, I can review or update type data

Acceptance Criteria:

Clicking view, load the selected rejection reason data

Edit button enabled

(3) Edit rejection reason

AS a System Administrator

Want to Update an existing rejection reason info

So, the master data remains accurate and updated

Acceptance Criteria:

rejection reason name editable

type list editable

Update the type data

(4) View rejection reason

AS a System Administrator

Want to view all defined departments in a sortable grid

So, I can easily find and manage rejection reason records

Acceptance Criteria:

Grid display all configured\ defined rejection reason

User can sort the grid by clicking any column headers

Each row provide view and delete action

4.16 Type setup:

Defining Type Screen:

Description: Screen to define and manage main transaction types that are used throughout the system.

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
كود النوع	Auto increment ID	-		Sequence Last defined one + 1

- For tickets (issues), the assignment stage is reached immediately after ticket submission.
- For requests and approvals, the assignment stage is reached after the completion of all approval's workflow steps (defined from "Approvals & Requests Subcategories workflow' screen).
- If the selected subcategory doesn't have an existing configuration, the user may select multiple subcategories if none of them has an existing setup
- The setup configuration be applied to all selected subcategories

User stories:

(1) Define/ configure Subcategory/ies setup
AS a System Administrator
Want to Create a responsibilities, permissions and SLA configuration
So, transactions are processes according to setup rules
Acceptance Criteria:
System shall not allow saving until all mandatory fields in all section

(2) View subcategory setup
AS a System Administrator
Want to retrieve an existing subcategory record
So, I can review or update data
Acceptance Criteria:
Selecting the subcategory, load the selected subcategory data
Edit button enabled

(3) Define/ configure Subcategory SLA
AS a System Administrator
Want to define SLA duration
So, transactions are processed within the required time frame
Acceptance Criteria:
Days, Hours and Minutes are mandatory
Total SLA cannot be zero

(4) Define/ configure Subcategory responsibilities
AS a System Administrator
Want to define the organization scope responsible for handling transactions
So, submitted transactions are automatically assigned to appropriate users
Acceptance Criteria:
Sector mandatory for filtering department
Department mandatory
One or more titles can be selected
Assignment method mandatory
Priority mandatory
After saving successfully, the system shall assign it according to the configured responsibilities

(5) Define/ configure Subcategory permissions

AS a System Administrator

Want to define the organization scope responsible for handling transactions

So, submitted transactions are automatically assigned to appropriate users

Acceptance Criteria:

Sector mandatory for filtering department

Department mandatory

One or more titles can be selected

Assignment method mandatory

Priority mandatory

After saving successfully, the system shall assign it according to the configured responsibilities

(6) Define/ configure Subcategory final status

AS a System Administrator

Want to define the status that will be assigned after the responsible user completes the required action

So, transaction status changes automatically without manual intervention

Acceptance Criteria:

Final status mandatory (responsibilities section)

After the assigned user submit that completes the required action, system shall update the status automatically

(7) Define/ configure Subcategory submitting transaction 's status

AS a System Administrator

Want to define the status that will be assigned after the authorized user submits transaction

So, transaction status changes automatically without manual intervention

Acceptance Criteria:

Final status mandatory (permission section)

After the authorized user submits transaction, system shall update the status automatically

(8) prevent duplicate workflow configurations

AS a System Administrator

Want to prevent conflicting workflow defines

So, each subcategory is configured consistently

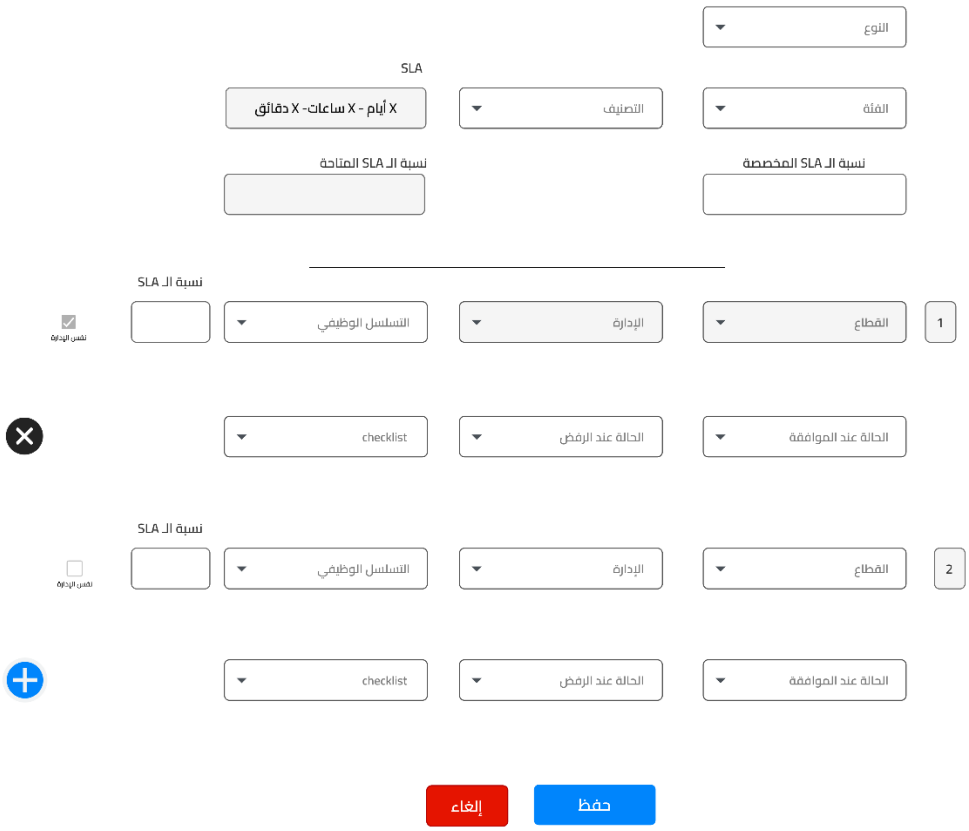

Acceptance Criteria:

System must validate the following points in subcategory selection:

A subcategory that already has a workflow setup cannot be grouped with other subcategories in the new configuration.

Multiple subcategories can be configured together only if none of them already has an existing workflow setup.

Approvals & Requests Subcategories workflow Screen:

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
النوع	Dropdown list	Mandatory	Single selection Retrieve the categories that linked to selected type and display them in "الفئة' dropdown list Incase user select approvals (الموافقات) and disabled/ disappear "checklists' field Incase user select requests (الطلبات) and disabled/ disappear "حالة الرفض' field	Only approvals – requests type
الفئة	Dropdown list	Mandatory	Single selection Retrieve the only active subcategories that linked to selected category and display them in "التصنيف' dropdown list	categories links to types from "categories setup' screen
التصنيف	Dropdown list	Mandatory	If user selects a subcategory that already has a defined setup, disabled the dropdown lists "النوع' & "الفئة' & "التصنيف', retrieve setup	All active subcategories links to categories from "subcategories define' screen

Fields

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
			In case the HR code belongs to account with status not equal 1(active), display error msg with the current account (user) status In case the HR code does not belong to selected on-behalf type, display error msg with the correct type " ليس موظف بالفروع/ بالمركز الرئيسي'	On - behalf defined from "subcategories setup' screen, Permissions section
اسم الموظف	Auto generated	-	If the employee (HR code / national ID) exists, display username	Visible only if the on-behalf HQ or Branches is selected – نيابة عن On - behalf defined from "subcategories setup' screen, Permissions section
تفاصيل	text	Mandatory	Accepts Arabic & English Alphabet, numbers and symbols (), - /	Max.1000 characters
Upload	Button	Optional Conditional	Opens file explorer to select one PDF or JPG or PNG file only within the max. file size	Mandatory or optional based on the configured for the selected subcategory from "Subcategories setup' screen, Permissions section
اسم الملف	Auto generated	-		Uploaded file name
مسح	Button	Appears only after uploading file	Delete the uploaded file Then the upload button will be enabled	
تنزيل	Button	Appears only after uploading file	Download uploaded file	
تسجيل	Button	Fill and validates all mandatory fields	for E-payment tickets, System invokes CRM API to create ticket with the following entered data client national ID, Client name, Phone No., case requester define as قطاع الأعمال case type defines as customer complaint customer status defines as عميل case type defines as Helpdesk case type defines as مشاكل الدفع الألكتروني then Generate a unique ticket NO. (sequence last ticket number + 1)	initial status configured from "Subcategories setup' screen permission section assignment method configured from "Subcategories setup' screen Responsibility section In direct assigning method case user determines responsible user from "Subcategories setup' screen Responsibility section

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
			For e-payment tickets to assigning processing will proceed Determine and update the initial status based on the configured permission setup Determine the assignment method configured for the selected sub issue category If the assignment method is direct method, automatically assign the ticket to configured responsible user based on user branch and activity and display the ticket in his own tasks screen – issues tab If the assignment method is pool method, automatically make the ticket available to all eligible users and display the ticket in tasks screen – issues tab for all of them Generate/begin the internal processing queue Save the ticket data (creation datetime and user and ticket details) Send e-mail to the ticket creator with the ticket info and send e- mail to the assigned responsible Display confirmation msg with the ticket no and total configured SLA.	In pool assigning method case user determines responsible user from "Assigning setup – توزيع المهام' screen
إلغاء	Button	-	Clear entered and selected value	

Business /General rules:

- Logged user shall only be able to view/select active issues subcategories and categories that they are authorized to submit according to configured setup from "Subcategories setup' screen permission section
- Inactive subcategories shall not be available for submission.
- Responsible department shall be automatically populated based on the configured setup from "Subcategories setup' screen responsibility section
- Responsible sector shall be automatically derived from the responsible department, sector that currently linked to the responsible department from "Department setup' screen
- Attachement requirement shall be determined based on the defined configuration for the selected subcategory from "Subcategories setup' screen permission section
- The upload file shall not exceed the configured maximum attachment size (حجم الوثائق).

- Upon successful registration, system shall generate a unique ticket number using sequential numbering mechanism (last generated ticket number +1)
- Logged user shall be recorded as the ticket creator
- Ticket's initial status shall be assigned automatically based on the defined configuration for the selected subcategory from "Subcategories setup' screen permission section
- Assignment method based on the defined configuration for the selected subcategory from "Subcategories setup' screen responsibilities section

  Direct Assignment method
  - Tickets shall be assigned automatically to the configured responsible user from "Assigning setup – توزيع المهام' screen-tab
  - Upon assignment, system shall generate an internal processing queue for the assigned user
  - The internal queue ordering shall consider the configured priority.

  Pool Assignment method
  - Tickets shall be available simultaneously to all eligible users with job title that defined in issue subcategory configuration from "Subcategories setup' screen responsibilities section
  - First eligible user who opens the ticket shall become the assigned responsible user
  - Once claimed, ticket shall no longer be available to the other users.
- After successful registration, system shall display a confirmation msg containing the generated ticket no. (تم تسجيل المشكلة بنجاح رقم التزكرةxxx+ Total SLA)

User stories:

(1) View available issue categories
AS an Employee
Want to view only the issue categories related to issues (subcategories) that I am authorized to submit
So, I can register only permitted issues
Acceptance Criteria:
System displays only categories related to issues (subcategories) that the logged- user has permission to submit
Unauthorized categories shall not be displayed

(2) View available issues
AS an Employee
Want to view only the issues (subcategories) that I am authorized to submit
So, I can register only permitted ticket
Acceptance Criteria:
System displays only active issues (subcategories) that liked to selected category
Changing the category refreshes the issues list

(3) Register a new issue
AS an Employee
Want to submit new ticket
So, I can be handled by the responsible department
Acceptance Criteria:
Mandatory fields are valid
The Ticket is saved successfully

(4) upload supporting attachment
AS an Employee
Want to submit new ticket
So, I can be handled by the responsible department
Acceptance Criteria:
If the selected issue requires an attachment, submission is blocked until an attachment is uploaded

Unique ticket no. is generated automatically

Display confirmation msg with ticket no.

If the selected issue doesn't require an attachment, uploading remains optional

Only one attachment is allowed

Only PDF, JPG and PNG formats are accepted

Uploaded file must not exceed the configured max. size

(5) Automatic status assignment

AS an Employee

Want to assign the initial ticket status automatically

So, that newly created tickets start with the correct status

Acceptance Criteria:

Initial status is retrieved from configured permissions setup

Status is assigned automatically during registration

User cannot manually change the initial status during ticket creation

(6) Automatic status assignment

AS an Employee

Want to determine the assignment method automatically

So, the ticket reaches the responsible user

Acceptance Criteria:

System determines the configured assignment method for the selected issue

If the method is direct, the ticket is assigned to the configured responsible user

If the method is pool, the ticket available to all eligible tittles

(7) Direct assignment

AS a system

Want to assign direct tickets automatically

So, they are immediately routed to the configured responsible user

Acceptance Criteria:

Responsible user is determined according to the direct assignment configuration

The ticket is assigned automatically

Internal queue is generated

(8) pool assignment

AS a system

Want to publish ticket to all eligible users

So, the first user who claims the ticket becomes responsible for handling it

Acceptance Criteria:

The ticket is visible to all eligible users

first user who claims the ticket becomes the assigned user

The ticket is removed from remaining pool users

Internal queue is generated after claim

(9) Populate responsible department

AS a system

Want to determine responsible department automatically

So, users can identify the responsible department

Acceptance Criteria:

Responsible department is determined according to responsible configuration

Responsible sector is automatically derived from the department that linked to it

Both field is read – only

(10) Generate ticket no.

AS a system

Want to generate a sequential ticket no.

So, every ticket has a unique identifier

Acceptance Criteria:

Ticket no. is generated automatically

Value equals the last generated ticket no. +1

Duplicate ticket no. is not allowed

Users cannot edit ticket no.

(11) cancel registration

AS an Employee

Want to cancel my current input

So, I can start over without saving the ticket

Acceptance Criteria:

Clicking "إلغاء" clears all entered values

Uploaded attachment is removed

Validation msg are cleared

No data is saved

Screen returns to its initial state

View submitted tickets tab:

Description: This tab allows users to search for and view all issues that have been submitted from logged user side.

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
بحث	text	Optional	Search within the displayed tickets in the grid	
The grid (allows users to change the sorting order by clicking the grid headers) displays the submitted tickets from the user - default order earliest to oldest creation datetime				
رقم الطلب	Auto generated	-		
تاريخ التسجيل	Auto generated	-	Ticket creation datetime DD/MM/YY HH:MM	
فئة المشاكل	Auto generated	-		
المشكلة	Auto generated	-	Current ticket status	
الحالة	Auto generated	-	Current ticket status

Business /General rules:

- Screen shall display only tickets created by the logged user

- The default grid order shall be by creation datetime, from newest to oldest and status not closed tickets be first
- The status displayed shall always reflect the latest ticket status
- Users shall be able to sort the grid by clicking the column headers.
- When value is entered in search field, system shall search within:
    - Ticket number
    - Ticket Category
    - Ticket Subcategory
    - Ticket status

User stories:

(1) View my submitted issues

AS a Ticket creator – employee

Want to view all tickets that I have created

So, I can monitor their progress

Acceptance Criteria:

Only tickets created by me are displayed

The grid is ordered by creation date by default

Displayed status always reflects the latest status

(2) search submitted issues

AS a Ticket creator– employee

Want to search for specific ticket from my submitted tickets

So, I can quickly locate the ticket

Acceptance Criteria:

I can search by ticket no.

I can search by issues category

I can search by status

If no filters are entered, all my submitted tickets are displayed

(3) View ticket details

AS a Ticket creator– employee

Want to open a submitted ticket

So, I can review all its information

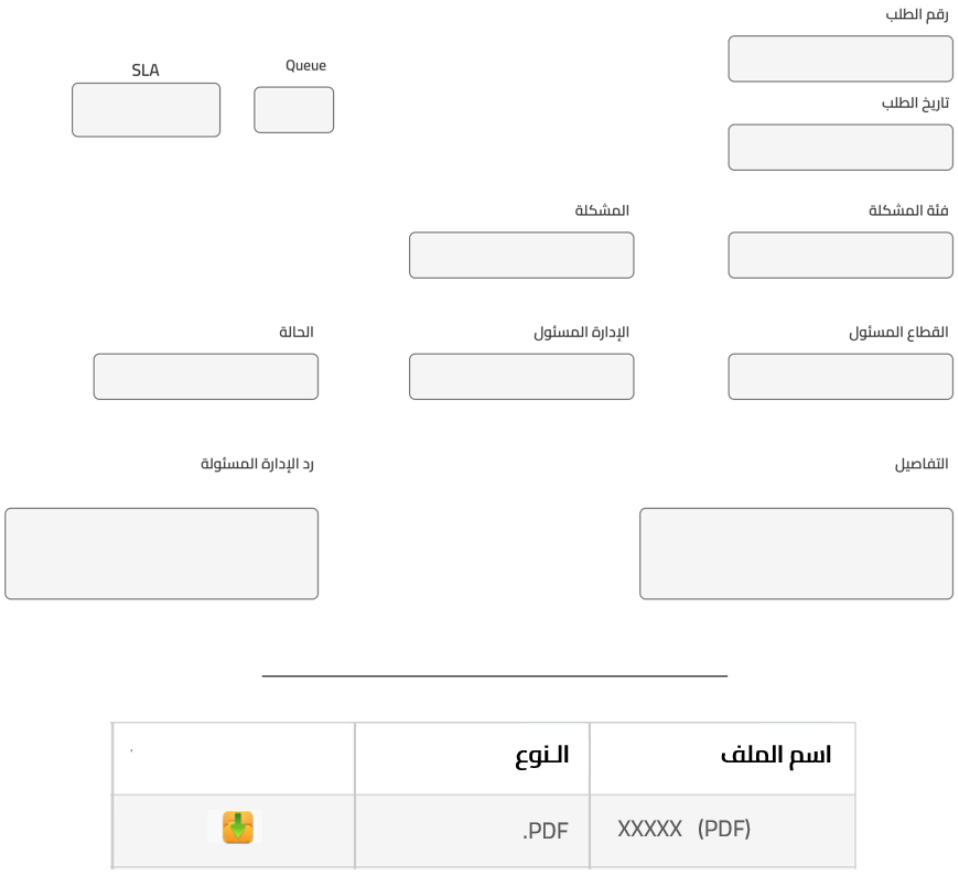

Acceptance Criteria:

Clicking "عرض' opens the selected ticket

All ticket details are displayed in read-only mode

No modification can be made

View ticket details screen:

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
رقم المشكلة	Auto generated	-	Ticket no. that generated during registration

تسجيل	Button	-	Update the ticket status to "معادة للمعالجة' code (3) and record the rejection reason, datetime, details and document (if any)	
إلغاء	Button	-	Close pop-up without performs any action	

Business /General rules:

- SLA:
  - Remaining SLA shall be calculated dynamically based on the configured SLA and recorded time taken
  - Once the responsible user starts processing the ticket, the SLA shall start countdown automatically
  - SLA countdown shall be calculated based on the configured working days (vacations setup screen) and working hours only (general setup screen).

- Before the responsible user starts processing the ticket, the SLA countdown field shall display the configured total SLA without starting the countdown.
- Before SLA starts, system shall display the inline msg – "سيبدأ احتساب الوقت عند بدء معالجة المشكلة من قبل المسئول"
- When SLA reaches zero, the countdown shall continue displaying overtime in a negative format.
- SLA countdown shall stop when the ticket reaches the resolution status based on the configured Responsibility setup
- If the ticket creator rejects the solution, the SLA countdown shall resume from the remaining duration and shall not reset
- SLA countdown shall be calculated based on the configured working days (vacations setup screen) and working hours only (general setup screen).

- QUEUE:
  - If the ticket is assigned to a specific responsible user, the queue no. shall display the current processing order calculated according to the configured queue logic
  - If the ticket is still waiting in a pool and has not yet been claimed, current queue no. displays "-'
  - While the ticket is unclaimed in a pool, the system shall display inline msg – " سيتم تحديد رقم الدور بعد استلام المشكلة من قبل احد المختصين'
  - Whenever a ticket is assigned, reassigned, reprioritized, or returned after rejection, the queue shall be recalculated according to configured queue calculation criteria
- CLOSE TICKET:
  - "Close' button shall be visible only when the current ticket status equals to the configured responsible resolution status
  - After confirming the ticket closing, system shall update the ticket status to closed ticket/ تم إغلاق المشكلة
  - Closing ticket shall be recorded in the audit log
- REJECT RESOLUTION:
  - "reject' button shall be visible only when the current ticket status equals to the configured responsible resolution status
  - New rejection attachment shall be added to the existing ticket attachment history
  - System shall increment/count the rejection counter for the ticket
  - If the rejection counter reaches or exceeds the threshold configured (عدد مرات الرفض المسموح بها) in the general setup, escalation email shall be sent automatically to the configured job hierarchy in the responsible department and in the ticket creator department with the ticket creator
  - If the ticket was originally assigned through the pool assignment method, it shall be returned to the same user who previously claimed and handled it
  - If the ser who previously claimed and handled it is resigned (مستقيل), system shall return the ticket to pool method for all eligible users or direct method for new configured users
  - When the rejected ticket is returned to the responsible user, its queue position shall be recalculated logic (priority, current workload)
  - After responsible user resolves the ticket again, it shall be returned to the ticket creator for either close or reject

- All rejection actions and escalations shall be recorded in the audit log

- Each audit log entry shall include, at minimum:
  - User code
  - Datetime
  - Remaining SLA
  - Action performed
  - Device IP address

User stories:

(1) View Ticket details

AS a Ticket creator

Want to know the current processing queue of my ticket

So, I can track its current status and resolution progress

Acceptance Criteria:

Only the ticket creator can access the screen

All displayed info is read-only

Displayed status always reflects the latest status

(2) View SLA progress

AS a Ticket creator

Want to know the remaining SLA for my ticket

So, I can monitor the expected handling time

Acceptance Criteria:

Before processing starts, the configured total SLA is displayed

Inline msg informs the ticket creator that the countdown will start once processing begins

Once processing begins, SLA is displayed as a countdown timer

If ticket is rejected and returned, the countdown continues from the remaining time

(3) View Queue position

AS a Ticket creator

Want to know the remaining SLA for my ticket

So, I understand its current processing order

Acceptance Criteria:

If the ticket is assigned to a responsible user, current queue no. is displayed

If the ticket is still waiting in a pool, current queue no. displays "-'

An inline msg informs the ticket creator that the queue no. will appear once ticket is assigned

(4) Close ticket

AS a Ticket creator

Want to close my ticket after confirming that the issue has been resolved

So, the ticket lifecycle/ flow is completed successfully

Acceptance Criteria:

"إغلاق' Button is visible only when ticket reaches the configured responsible resolution status

Closing ticket updates its status to closed - تم إغلاق المشكلة

Closing action is recorded

(5) Reject Solution

AS a Ticket creator

Want to reject the provided solution if my issue has not been resolved

So, the responsible user can continue working on it

Acceptance Criteria:

(6) Return ticket to responsible user

AS a system

Want to return rejected tickets to the same responsible user who previously handled them

So, ticket ownership remains same

Acceptance Criteria:

Pool assigned tickets return to same user who claimed them

"رفض' Button is visible only when ticket reaches the configured responsible resolution status

Rejection reason is mandatory

Rejected ticket updates its status to معادة للمعالجة

rejected action is recorded

(7) Escalate excessive rejections

AS a system

Want to escalate tickets that exceed the configured rejection threshold

So, that management is notified automatically

Acceptance Criteria:

System counts ticket rejections count

Once the configured threshold is reached or exceeded, an escalation email is sent automatically

Escalation is recorded in audit log

Ticket ownership is preserved after rejection

Queue position is recalculated according to the configured queue logic

Summitting feedback on Tickets:

Issues tab:

Description: This tab is part of the "Tasks' Screen, which consists of three tabs (Issues, Requests and approvals), issues tab allows responsible users (Job titles) to view and manage all currently assigned open tickets.

If No tickets are assigned to the logged user, system shall display "لا يـوجد بيانات'

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
إجمالي عدد المشاكل	Auto generated	-	Total Count of all open assigned tickets	
إجمالي عدد المشاكل الجاري حلها	Auto generated	-	Total Count of all open assigned tickets and SLA countdown begin (user open the ticket)	

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
بحث	text	Optional	Search within the displayed tickets in the grid	
The grid (allows users to change the sorting order by clicking the grid headers) displays all assigned tickets to the user and status not closed (2) or closed from responsible (4)				
Queue	Auto generated	-	Ticket queue no.	
رقم المشكلة	Auto generated	-	Ticket no. that generated during registration	
تاريخ التسجيل	Auto generated	-	Ticket creation datetime DD/MM/YY HH:MM	
المسمى الوظيفي	Auto generated	-	Display the Requester job title	
القطاع	Auto generated	-	Display the sector linked to current requester department	Departments assigned to Sector from "Department setup' screen
الإدارة	Auto generated	-	Display the Requester department	
المقر	Auto generated	-	Requester Location (HQ/ branches) Display the branch name if the requester associated to branch	
فئة المشكلة	Auto generated	-	Display the selected issue main category during ticket registration	
المشكلة	Auto generated	-	Display the selected issue (subcategory) during ticket registration	
الأهمية	Auto generated	-	Display configured priority level	
الحالة	Auto generated	-	Display the latest/current ticket status	
طريقة التعيين	Auto generated	-	Display configured assignment method (pool/ Direct)	
SLA	Auto generated	-	Before the responsible user starts processing (view ticket details) display the configured Total SLA	
عرض	Button	Enabled for each ticket	Retrieve and display the ticket details in read-only mode in "Summitting feedback' Screen and begin SLA countdown	

Business /General rules:

- Screen shall display only tickets assigned to logged responsible user
- Users shall not be able to view tickets assigned to other users
- If no assigned open tickets exit, system shall display "لا يوجد بيانات'
- Search shall be performed only against tickets displayed in the grid
- When value is entered in search field, system shall search within:
  - Ticket number

  - Ticket Category
  - Ticket Subcategory
  - Ticket status
  - Sector
  - Titles, etc.
- Grid shall display only tickets that are not closed status (not equal 3)
- By default, tickets shall be order by queue position (ascending)
- Uses unable to change the grid sorting
- System shall retrieve requester location from user defined info "user setup' screen
- If user assigned to a HQ display "المقر الرئيسي'
- If user assigned to a branch display the corresponding branch name
- Queue positions shall be calculated dynamically
- Queue calculation shall consider:
  - Ticket Priority
  - Ticket Creation datetime
  - Current assigned workload
- Higher Priority tickets shall appear before lower priority tickets that do not start processing yet
- Within the same priority level, older tickets shall be before newer tickets
- Queue positions shall be recalculated whenever:
  - A new ticket is assigned
  - A ticket is reassigned
  - The ticket is closed
  - Ticket Priority changes
  - A rejected ticket is returned
- When a rejected ticket returns to a user, the queue shall be recalculated according to the same new ticket logic
- Rejected pool tickets shall return to the same user who originally claimed them
- Before processing starts, the SLA column shall display the configured total SLA
- Once the user starts processing (press/click "View' button) the ticket, SLA countdown shall begin
- SLA countdown shall be calculated based on the configured working days (vacations setup screen) and working hours only (general setup screen).
- SLA countdown shall continue until the ticket is closed
- If the requester rejects the solution, the SLA countdown shall continue from the remaining time and shall not be reset the SLA
- Direct assigned ticket shall appear immediately to the only responsible user based on configurations that defined from "Assigning – توزيع المهام' screen

- Pool assigned tickets shall appear to all eligible users whose job title configured from "Subcategories setup' screen, responsibilities section
- Once claimed (one of eligible user press/click "View' button), ticket shall disappear from all other pool/tasks users
- Tickets for which processing has started (Countdown is running) shall be highlighted using the light red color in the grid
- Each audit log entry shall include, at minimum:
  - User code
  - Datetime
  - Action performed
  - Device IP address

User stories:

(1) view Assigned open tickets
AS a Responsible user
Want to view all open tickets assigned to me
So, I can manage my workload
Acceptance Criteria:
Only my assigned tickets are displayed
Closed and solved ticked are excluded
If no tickets exist, "لا يـوجد بيانات' is displayed

(2) Search assigned tickets
AS a Responsible user
Want to search within my assigned tickets
So, I can quickly locate a specific ticket
Acceptance Criteria:
Search support:
Ticket no., category, subcategory, status, sector, department, title, etc.
Search results are limited to tickets viewed in the grid

(3) Monitor Queue position
AS a Responsible user
Want to view ticket queue positions
So, I can understand processing order
Acceptance Criteria:
Queue numbers are displayed for assigned tickets
Queue is recalculated automatically when workload changes

(4) Monitor SLA
AS a Responsible user
Want to Monitor SLA progress
So, I can handle tickets within their target resolution time
Acceptance Criteria:
Total SLA is displayed bef. Processing begins (open ticket)
Countdown starts when processing starts
Countdown continuous after requester rejection
Remaining SLA is always visible
Countdown be highlighted using the light red color in the grid

(6) Handle pool tickets
AS a Responsible user
Want to claim pool assigned tickets
So, I can become responsible for resolving the ticket
Acceptance Criteria:
Tickets pool are visible to all eligible users
First user claiming the ticket becomes responsible
Tickets disappear from other pool users

(6) Receive rejected tickets
AS a Responsible user
Want to the rejected tickets return to me
So, I can continue handling the same issue without ownership changes
Acceptance Criteria:
Rejected pool tickets return to the original responsible user
Queue is recalculated upon return

Queue position is assigned after claim

Remaining SLA continues from the previous remaining duration

(7) view ticket details

AS a Responsible user

Want to open ticket details

So, I can review all information before taking action

Acceptance Criteria:

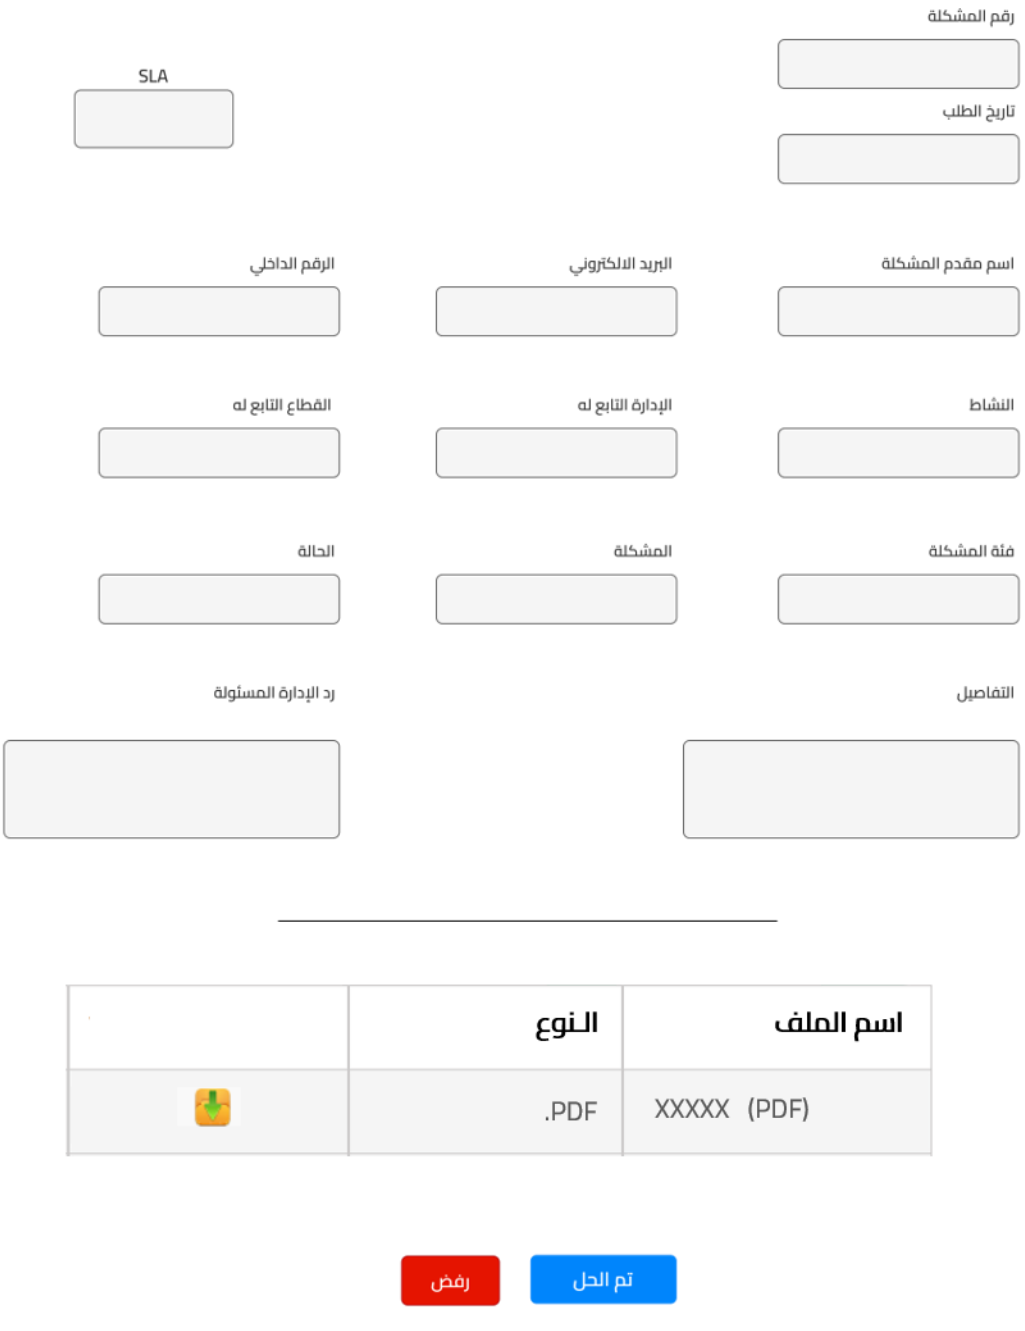

"عرض" available for each ticket

Clicking "عرض" opens the complete ticket info

All registration info is available

Workflow actions are available according to the current status

إلغاء	Button	-	Close pop-up without performs any action	

Business /General rules:

- Attachment uploaded during ticket registration/ submit the rejection shall remain available for download
- Attachment shall not be deleted or replaced.
- Only ticket that reaches the configured resolution status, shall be return to ticket creator
- System shall return the ticket to creator able to either close or reject the ticket after resolution
- All actions shall be recorded
- system shall record actual processing duration (Time Taken) for each ticket
- SLA countdown shall be calculated based on the configured working days (vacations setup screen) and working hours only (general setup screen).
- Remaining SLA shall be calculated dynamically based on the configured SLA and recorded time taken
- When SLA reaches zero, the countdown shall continue displaying overtime in a negative format.
- SLA countdown shall stop when the ticket reaches "Closed from responsible/ مغلقة من المسئول' status
- SLA countdown shall stop when the ticket reaches the configured resolution status.
- If the requester rejects the solution, the SLA countdown shall resume from the remaining duration.
- Once the ticket is resolved or returned by creator for rework, system shall not allow to user to reject ticket (button "reject ticket' no longer be available)
- Each audit log entry shall include, at minimum:
    - User code
    - Datetime
    - Remaining SLA
    - Action performed

- Device IP address

User stories:

(1) view ticket details
AS a Responsible user
Want to view all ticket information
So, I can understand the issue before taking action
Acceptance Criteria:
Ticket details are displayed in read-only mode
Requester information is displayed
Attachment can be downloaded

(2) Resolve ticket
AS a Responsible user
Want to provide a solution and mark ticket as solved
So, I can review proposed
Acceptance Criteria:
Ticket status changes
Ticket is routed to requester
SLA timer stops

(3) reject ticket
AS a Responsible user
Want to reject invalid ticket
So, I can close invalid requests
Acceptance Criteria:
Define rejection reason
Update ticket status
Close ticket
SLA timer stops

(4) download attachment
AS a Responsible user
Want to download ticket attachments
So, I can review supporting docs. Related to the issue
Acceptance Criteria:
All uploaded attachments are displayed
Retrieves and download the selected attachment correctly

(5) rework rejected solution ticket
AS a Responsible user
Want to continue processing tickets that were rejected by creator
So, I provide an updated solution without losing previous progress
Acceptance Criteria:
Reassigned to same responsible user
"رفض المشكلة' button is hidden
SLA countdown resumes from the remaining time
Pervious Reponses remains available for reference

(6) View ticket history
AS a Responsible user
Want to view previous responses and actions
So, I can understand ticket history before taking further action
Acceptance Criteria:
Resolution history is available and visible
Rejections reasons from creator are available and visible

- For pre-boarding requests, if the entered National ID is associated with an existing employee/ user account, system shall display the retrieve employee information, all fields shall be editable expect full name field.
- System shall prevent the creation of pre-boarding requests for active employees/ users (Not resigned).
- For On-behalf requests (configured from "Subcategories setup' screen permission section), system shall validate the entered HR code/ national ID associated with branch employee or HQ employee/ user based on the on-behalf type.
- For employee clearance (main category code= 1) or employee transfer (main category code= 2), system shall prevent user submitting request for user account status is not active (resigned).

- System shall prevent creating a new employee clearance (main category code = 1), if the employee/ user already has an open request associated with subcategory linked to the main category
- System shall prevent creating a new employee transfer (main category code =2) request, if the employee/ user already has an open request associated with subcategory linked to the main category
- User shall not have an open request associated with subcategory linked to them employee clearance (main category code =1) or employee transfer (main category code = 2) request together at the same time.
- User shall not have more than one open request associated with subcategory linked to employee clearance (main category code = 1)
- User shall not have more than one open request associated with subcategory linked to employee transfer (main category code = 2)
- For On-behalf requests (configured from "Subcategories setup' screen permission section), the request shall be visible to both users the creator and the related user (entered HR code) in the submitted requests in tab "الموفقات'.
- System shall maintain a clear separation (differentiate) between the request creator (logged user) and the related user (entered HR code/ national ID)
- The request shall be visible to the creator and the related employee according to their configured from "Subcategories setup' screen permission section
- The request creator and related employee shall be treated as separate users for tracking and notification purposes.
- Upon successful registration, system shall generate a unique request number using sequential numbering mechanism (last generated request number +1).
- Logged user shall be recorded as the request creator.
- Request initial status shall be assigned automatically based on the defined configuration for the selected subcategory from "Subcategories setup' screen permission section
- For stages that have configured Department reference, system shall determine the department as follows:
    - If the configured Department reference for stage is "Logged user', system shall assign request for the selected hierarchy in the request creator department.
    - If the configured Department reference for stage is "Related user', system shall assign request for the selected hierarchy in the department of the selected user (HR code/ national ID that entered in the submission phase) in behalf section
    - If the configured Department reference for stage is "Selected/ target dep', system shall assign request for the selected hierarchy in the selected department in related department - الإدارة المرتبطة بالطلبsection
- The request shall be assigned directly to the first workflow step that defined in approval workflow from "Approvals & request workflow setup' screen
- After successful registration, system shall display a confirmation msg containing the generated request no. (تم تسجيل الطلب بنجاح رقم الطلبxxx & SLA).
- longer be available)
- Each audit log entry shall include, at minimum:
    - User code

- Datetime
- Remaining SLA
- Action performed
- Device IP address

User stories:

(1) Register request

AS a system user

Want to submit a request

So, it can be routed through configured approval workflow

Acceptance Criteria:

Only permitted subcategories

Mandatory fields are validated

Request no. generated

Initial status assigned

First responsible user is determined automatically

(2) Upload supporting documents

AS a system user

Want to attach supporting file

So, stakeholders have sufficient info to review request

Acceptance Criteria:

Supported file types only

Upload mandatory only if configured

Attachment remains available during the workflow

(3) Register clearance request

AS a system user

Want to register/ begin my clearance request

So, I can process clearance workflow

Acceptance Criteria:

Display last working date

Mandatory fields are validated

Assign request to configured workflow after submitting

(4) Register Employee transfer request

AS a system user

Want to register/ begin my transfer request

So, I can process transfer workflow

Acceptance Criteria:

Display transfer type

Permanent and secondment options are available

Secondment displays from and to date

To date cannot be earlier than from date

Assign request to configured workflow after submitting

(5) Register requests on behalf of employees

AS a system user

Want to submit a request on behalf of another employee

So, I can register for employees when permitted

Acceptance Criteria:

On behalf of is displayed only when configured

The configured employee identification field is displayed

Only one identification method can be entered at a time

The other identification field remains disabled

Existing employee info is retrieved and displayed as read-only

(6) Register pre-boarding request

AS a system user

Want to register pre-boarding request

So, the required employee onboarding activities can be initiated

Acceptance Criteria:

Valid National ID or HR code for resigned employee

Existing employee info is retrieved and displayed as editable mode

retrieved Full name displayed as read-only

Mandatory fields are validated

Expected appointment date is displayed

If employee is not found, configured manual fields becomes editable

(7) Identify exiting employee

AS a system user

Want to Retrieve employee info using employee identification

So, I do not need to enter employee data manually and check that the entered identification belongs to right employee

Acceptance Criteria:

Employee name is editable

Title is editable

Activity, Department and location is editable

Registration follows the configured mandatory fields

(8) Enter employee not found

AS a system user

Want to manually enter employee when employee not exist

So, I can continue registering request when permitted

Acceptance Criteria:

Employee name is editable

Title is editable

Activity, Department and location is editable

Registration follows the configured mandatory fields

(9) Select activity and related department

AS a system user

Want to select the activity and related department when required by the workflow setup

So, system can route the relevant workflow stages to the correct department

Acceptance Criteria:

System checks the configured workflow stages

Activity and related department are displayed if any stage uses related department

Activity is mandatory

Related department is mandatory

Related department options depend on the selected activity

Request no. generated

(10) Automatic workflow routing

AS a system

Want to automatically assign my request to all required approvals levels

So, no manual routing

Acceptance Criteria:

Assignment follows the preconfigured (select hierarchy, department and location (HQ or selected branch)

Workflow starts from first step

Status update automatically

(11) Assign request to eligible user

AS a system

Want unique identifier for each request

So, the request can be tracked throughout its lifecycle

Acceptance Criteria:

Each request receives unique number

DCR code use to identify the document only

(12) Generate request no.

AS a system user

Want unique identifier for each request

So, the request can be tracked throughout its lifecycle

Acceptance Criteria:

Each request receives unique number

DCR code use to identify the document only

(13) Cancel Registration

AS a system user

Want to cancel the registration

So, can clear the entered info and restart the registration if needed

Acceptance Criteria:

Entered values are cleared

Selected values are reset

Registration screen returns to the initial state

View submitted requests tab:

Description: This tab allows users to search for and view all requests that have been submitted from logged user side or requests where the logged user is identified as related user.

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
بحث	text	Optional	Search within the displayed in the grid	
The grid (allows users to change the sorting order by clicking the grid headers) displays the submitted request from the user - default order earliest to oldest				
رقم الطلب	Auto generated	-		
تاريخ التسجيل	Auto generated	-	request's creation datetime DD/MM/YY HH:MM	
فئة الطلب	Auto generated	-	request's main category	
الطلب	Auto generated	-	request's subcategory	
الحالة	Auto generated	-	Current request status	
عرض	Button	Enabled for each ticket	Retrieve and display the request details in read-only mode "View request details' Screen	

Business /General rules:

- Screen shall display only requests created by the logged user
- The default grid order shall be by creation datetime, from newest to oldest.
- The displayed status shall always reflect the latest request status
- Users shall be able to sort the grid by clicking the column headers.
- When value is entered in search field, system shall search within:
  - Request number

- Request Category
- Request Subcategory
- Request status

View Request details screen:

Description: Screen with three tabs, first tab "بيانات الطلب" used to view request data, second tab used "الموافقات" to view workflow authorized user's decision and third tab used "تفاصيل الموفقات" to view feedback/ decision details.

Tab "بيانات الطلب'

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
رقم الطلب	Auto generated	-	request no. that generated during registration	
تاريخ التسجيل	Auto generated	-	request creation datetime DD/MM/YY HH:MM	
SLA Countdown	Auto generated	-	Before the user starts processing, display the SLA allocated to the current stage (configured % of current stage * total SLA) After user begins/ view display SLA countdown	All SLAs configured from "Approvals & request workflow setup' screen
Queue no.	Auto generated	-	Display the current processing queue no. If the ticket has not yet been claimed, display "---' and display inline msg " سيتم تحديد رقم الدور بعد استلام الطلب من قبل احد المختصين'	
اسم مقدم الطلب	Auto generated	-	Display request creator 's username

القطاع المسئول	Auto generated	-	Sector that linked by the responsible department	
الإدارة المسئول	Auto generated	-	Responsible department	
الاجراء /القرار	Auto generated	-	Action taken	Approved / rejected
التعليقات	Auto generated	-	Rejection reason / return user	If any

Tab "تفاصيل الموافقات'

Description: Tab previous stages feedback shall be displayed in read-only mode.

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
Previous stage – display section for each pervious department				
Sector	Auto generated	-	Sector that linked to the department	Section name
Department	Auto generated	-	Department that completed the stage	
+	Auto generated	-	Expand department section	
-	Auto generated	-	Collapse department section	
Question	Auto generated	-	Radio button name	Displayed for each question
Feedback	Auto generated	-	Option selected by user	
الملاحظات	Auto generated	-		

Business /General rules:

Tab "بيانات الطلب'

- System shall display the request details in read-only mode.
- Conditional request fields shall be displayed based on the main category.

SLA:

- Before SLA starts, system shall display the inline msg – "سيبدأ احتساب الوقت عند بدء معالجة الطلب"
- Before the first user in the flow begins in processing, the SLA countdown field shall display the configured total SLA without starting the countdown.
- Once the user starts processing the request, the SLA shall start/ continue countdown automatically
- Total SLA countdown shall be calculated based on the actual processing time and shall noy be reduced by the time spent waiting for the next workflow assignee to view or claim the request
- When SLA reaches zero, the countdown shall continue displaying overtime in a negative format.
- SLA countdown shall stop when the request reaches the configured Responsibility setup status "Subcategories setup' screen responsibilities section or when the request rejected at any workflow stage.

- Remaining SLA shall be calculated dynamically based on the configured SLA and recorded time taken for each workflow stage
- Total SLA countdown shall be calculated based on the configured working days (vacations setup screen) and working hours only (general setup screen).

QUEUE:

- If the request is assigned to a specific responsible user, the queue no. shall display the current processing order calculated according to the configured queue logic
- If the ticket is still waiting in a pool and has not yet been claimed, current queue no. displays "-'
- While the ticket is unclaimed in a pool, the system shall display inline msg – " سيتم تحديد رقم الدور بعد استلام الطلب من قبل احد المختصين'
- Whenever a ticket is assigned, reassigned, reprioritized, or returned after rejection, the queue shall be recalculated according to configured queue calculation criteria

- Uploaded docs shall be displayed only when docs were uploaded during request registration
- User shall be able to download an available document without modifying the request

Tab "الموافقات'

- Approval tab shall display all actions performed throughout the request workflow.
- Each approval action shall display the action datetime, username who performed the action in his department, the sector that associated to the department, action/ decision and comments or rejection reason
- The Grid shall be displayed in datetime order (from newest to oldest).

User stories:

(1) View request details

AS a request creator

Want to view all info related to my submitted request

So, I can track its current status and progress

Acceptance Criteria:

Only the request creator can access the screen

All displayed info is read-only

Displayed status always reflects the latest status

System shall display all applicable request details based on the selected /request main category

(2) View total SLA

AS a request creator

Want to know the remaining SLA for my request

So, I can monitor/ know the expected handling time

Acceptance Criteria:

Display remaining total SLA

Total SLA shall be calculated based on the configured SLA and applicable working days and hours

Total SLA shall be calculated based on actual processing time

The time spent waiting for the next workflow step shall not be consumed from the total SLA

Countdown shall stop when the request reaches a configured responsible status or when request rejected at any stage

(3) Track request during workflow

AS a request creator

(4) View Queue position

AS a Ticket creator

Want to know when my request is waiting for the assignee workflow to begin processing

So, I can understand why the request is not currently being processed

Acceptance Criteria:

System shall stop countdown the SLA, and display inline msg "سيتم استكمال الوقت عند بدأ معالجة الطلب من قبل مسئول المرحلة '

Want to know the remaining SLA for my ticket

So, I understand its current processing order

Acceptance Criteria:

Display the current queue no. when the request has been assigned

If the request is still waiting in a pool, current queue no. displays "-'

An inline msg informs the creator that the queue no. will appear once request is assigned

(5) View conditional request info

AS a request creator

Want to know/ view the request info applicable to its selected main category

So, I can see all relevant details without unnecessary fields

Acceptance Criteria:

All displayed values shall be read-only

(7) View workflow processing

AS a request creator

Want to know/ view the actions taken at each workflow step

So, I can follow the progress of my request from submission to completion

Acceptance Criteria:

Display the action performed at each completed workflow step

Display user who performed the action at each completed workflow step

Display the datetime of the performed action

(6) Download supporting docs

AS a request creator

Want to download the doc attached to the request

So, I can review the submitted supporting doc

Acceptance Criteria:

System shall display uploaded doc related to request

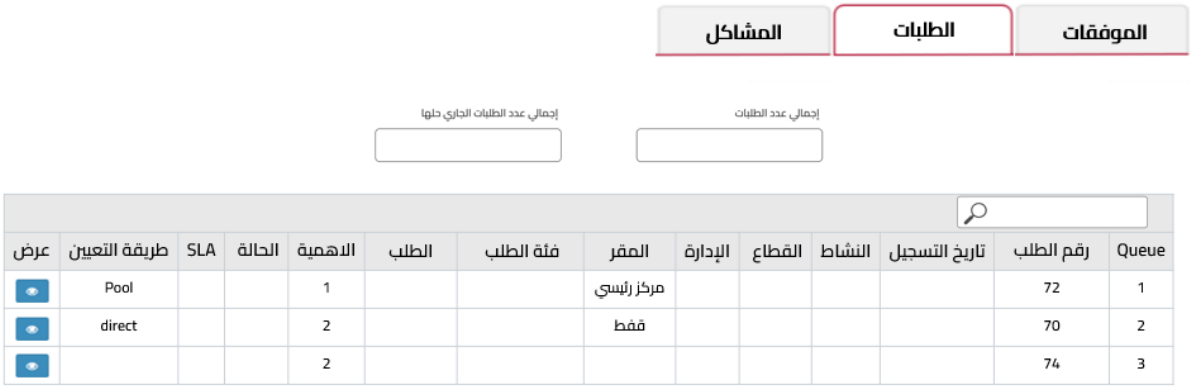

Clicking download shall download the selected doc

Summitting feedback on Requests:

Requests tab:

Description: This tab is part of the "Tasks' Screen, which consists of three tabs (Issues, Requests and approvals), Requests tab allows responsible users (Job titles) to view and manage all currently assigned open requests.

If No requests are assigned to the logged user, system shall display "لا يـوجد بيانات'

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
إجمالي عدد الطلبات	Auto generated	-	Total Count of all open assigned approval requests	
إجمالي عدد الطلبات الجاري حلها	Auto generated	-	Total Count of all open assigned approval requests and SLA countdown begin (user open the ticket)	
The grid (allows users to change the sorting order by clicking the grid headers) displays all assigned tickets to the user and not closed				
بحث	text	Optional	Search within the displayed tickets in the grid	
Queue	Auto generated	-	request queue no.	
رقم الطلب	Auto generated	-	Request no. that generated during registration	
تاريخ التسجيل	Auto generated	-	Request creation datetime DD/MM/YY HH:MM	
المسمى الوظيفي	Auto generated	-	Display the Requester job title	
القطاع	Auto generated	-	Display the sector linked to current requester department	Departments assigned to Sector from "Department setup' screen
الإدارة	Auto generated	-	Display the Requester department	
المقر	Auto generated	-	Requester Location (HQ/ branches) Display the branch name if the requester associated to branch	
فئة الطلب	Auto generated	-	Display the selected request main category during ticket registration	
الطلب	Auto generated	-	Display the selected issue (subcategory) during request registration	
الأهمية	Auto generated	-	Display configured priority level	
الحالة	Auto generated	-	Display the latest/current request status	
طريقة التعيين	Auto generated	-	Display configured assignment method (pool/ Direct)	
SLA	Auto generated	-	Before the responsible user starts processing, display the configured current stage SLA	

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
عرض	Button	Enabled for each request	Retrieve and display the request details in read-only mode in "Summitting feedback on request' Screen	

Business /General rules:

- Screen shall display only requests assigned to logged responsible user based on current stage of request
- User shall not be able to view requests assigned to other users
- If no assigned open requests exit, system shall display "لا يوجد بيانات'
- Search shall be performed only against approval requests displayed in the grid
- When value is entered in search field, system shall search within:
  - request number
  - request Category
  - request Subcategory
  - request status
  - Sector
  - Titles, etc.
- By default, requests shall be order by queue position (ascending)
- Uses unable to change the grid sorting
- System shall retrieve requester location from user defined info "user setup' screen
- If user assigned to a HQ display "المقر الرئيسي'
- If user assigned to a branch display the corresponding branch name
- Queue positions shall be calculated dynamically
- Queue calculation shall consider:
  - approval request Priority
  - approval request Creation datetime
  - Current assigned workload
- Higher Priority requests shall appear before lower priority request that not starts processing yet
- Within the same priority level, older requests shall be before newer approval
- Queue positions shall be recalculated whenever:
  - A new approval request is assigned
  - An approval request is reassigned
  - An approval request is closed
  - approval request Priority changes

- System shall determine the SLA applicable to the current stage based on the SLA % configured to the current stage from "Approvals & request workflow setup' screen.
- System shall calculate the current stage SLA applying as the following: SLA % configured to the current stage * total SLA
- Once the user starts processing (press/click "View' button) the approval request, SLA countdown shall begin
- SLA countdown shall be calculated based on the configured working days (vacations setup screen) and working hours only (general setup screen).
- SLA countdown shall continue until the user submits his action (approve/reject).
- For assignee workflow users, if only one eligible user, the system shall display the assign method is direct method
- For assignee workflow users, if more than one eligible user, the system shall display the assign method is pool method and treat request as the pool assign
- For responsible user, direct assigned shall appear immediately to the only responsible user based on configurations that defined from "Assigning – توزيع المهام' screen.
- Pool assigned approval request shall appear to all eligible users whose job title configured from "Subcategories setup' screen, responsibilities section
- Once claimed (one of eligible user press/click "View' button), approval request shall disappear from all other pool/tasks users
- approval request for which processing has started (Countdown is running) shall be highlighted using the light red color in the grid
- Each audit log entry shall include, at minimum:
    - User code
    - Datetime
    - Action performed
    - Device IP address

User stories:

(1) view Assigned open Approve requests

AS a Responsible user or approval processing workflow user

Want to view all approval requests requiring action from me

So, I can manage my workload

Acceptance Criteria:

Only my assigned approvals are displayed

Closed and not mu assigned stage are excluded

If no approvals exist, "لا يوجد بيانات' is displayed

All grid fields are read-only

(2) Search for assigned requests

AS a Responsible user or approval processing workflow user

Want to search within my assigned approval requests

So, I can quickly locate a specific ticket

Acceptance Criteria:

Search support:

request no., category, subcategory, status, sector, department, title, etc.

Search results are limited to requests viewed in the grid

(3) Monitor Queue position

AS a Responsible user or approval processing workflow user

Want to view request queue positions

So, I can understand processing order

(4) Monitor SLA

AS a Responsible user or approval processing workflow user

Want to Monitor SLA progress

So, I can handle requests within their target time

Acceptance Criteria:

Queue numbers are displayed for assigned requests

Queue is recalculated automatically when workload changes

Acceptance Criteria:

Applicable current stage is displayed bef. Processing begins (open request)

Countdown starts when processing starts

Remaining SLA is always visible

Countdown be highlighted using the light red color in the grid

(6) Handle pool Requests

AS a Responsible user or approval processing workflow user

Want to claim pool assigned requests

So, I can become responsible for taking the decision

Acceptance Criteria:

Requests pool are visible to all eligible users

First user claiming the request becomes responsible

Request disappears from other pool users

Queue position is assigned after claim

Summitting feedback (Requests):

Description: Screen with three tabs, first tab "بيانات الطلب" used to view request data, second tab used "الموافقات" to view workflow authorized user's decision and third tab used "تفاصيل الموفقات" to view details.

Tab "بيانات الطلب'

Description: This tab is part of the "Summitting feedback (Requests)' Screen, which consists of three tabs (بيانات الطلب, تفاصيل الموفقات and الموافقات), بيانات الطلب tab allows responsible users (Job titles) to view and manage all currently assigned open requests.

Business /General rules:

- System shall display the request details in read-only mode.
- Conditional request fields shall be displayed based on the main category.
- Approve and reject decisions enabled only for authorized users for the current workflow stage.
- If the current stage is not the final workflow stage, the request shall proceed to next configured workflow stage
- System shall determine the department and authorized user(s) for the next stage based on the configured department and Hierarchy
- IF the is more than one authorized user for the next stage, system shall treat the request as pool assignment method
- For stages that have configured Department reference, system shall determine the department as follows:
    - If the configured Department reference for stage is "Logged user', system shall assign request for the selected hierarchy in the request creator department.
    - If the configured Department reference for stage is "Related user', system shall assign request for the selected hierarchy in the department of the selected user (HR code/ national ID that entered in the submission phase) in behalf section
    - If the configured Department reference for stage is "Selected/ target dep', system shall assign request for the selected hierarchy in the selected department in related department - الإدارة المرتبطة بالطلبsection
- If the current stage is the final workflow stage, the request shall be routed to the configured responsible user
- responsible user based on the defined configuration for the selected subcategory from "Subcategories setup' screen responsibilities section
- Requests shall be assigned automatically to the configured responsible user from "Assigning setup – توزيع المهام' screen-tab
- On be-half requests, Requests shall be assigned based on the department and location of related user

- Upon assignment, system shall generate an internal processing queue for the assigned user
- longer be available)
- Each audit log entry shall include, at minimum:
    - User code
    - Datetime
    - Remaining SLA
    - Action performed
    - Device IP address
-
-

Tab "بيانات الطلب'

- System shall display the request details in read-only mode.
- Conditional request fields shall be displayed based on the main category.
- Uploaded docs shall be displayed only when docs were uploaded during request registration
- User shall be able to download an available document without modifying the request

Tab "الموافقات'

- Approval tab shall display all actions performed throughout the request workflow.
- Each action shall display the action datetime, username who performed the action in his department, the sector that is associated with the department, action/ decision and comments or rejection reason
- The Grid shall be displayed in datetime order (from newest to oldest).
- For returned request, system shall display action/ decision and comments/ returned reason

Tab "تفاصيل الموافقات'

- All previous workflow decisions and feedback shall be displayed in read-only mode
-

User stories:

(1) View request Info AS an authorized workflow user Want to view the request info before taking an action So, I can review the request details before taking my decision Acceptance Criteria: Request info is displayed in the first tab Info is read-only mode	(2) View previous workflow decisions AS an authorized workflow user Want to view the decisions and feedback submitted by previous workflow users So, I can review the request's workflow history before taking my decision Acceptance Criteria:

Applicable request details and attachments are displayed	Previous completed stages are displayed Each stage shows the responsible user and decision Feedback responses and comments are displayed Previous info is read-only
(3) View request Info AS an authorized workflow user Want to answer the feedback questions configured for my current stage So, I can record my assessment for the request Acceptance Criteria: Only questions configured for current stage are displayed Radio button options come from radio buttons setup All questions are mandatory to answer Submitted answers are stored with the action	(4) Approve request AS an authorized workflow user Want to approve the request So, the request can be proceeded through workflow Acceptance Criteria: Approve button is displayed for the authorized user only Mandatory feedback is validated Decision and feedback are saved If another stage exists, the request moves to the next stage If another stage does not exist, the request routes to the responsible user
(5) Reject request AS an authorized workflow user Want to reject the request So, the request can be identified as rejected Acceptance Criteria: Reject button is displayed for the authorized user only Mandatory feedback is validated Rejection reason is entered Decision and feedback are saved Request becomes available in return rejected requests screen (based on request category) Request does not proceed automatically to the next workflow stage	(6) view previous feedback after returned AS an authorized workflow user Want to view the previous decisions, including the rejection and return history So, I can understand the request's previous processing before taking new decision Acceptance Criteria: Previous feedback remains visible Previous rejection action and reason remain visible Return action is visible in request history (tab الموفقات) Previously submitted feedback (questions) viewed in modification mode
(7) Complete/ approve final workflow stage AS an authorized final workflow stage user Want to approve the request So, the request can be handled to the responsible user Acceptance Criteria: System identifies that the current stage is the final workflow stage Approval is recorded Request is routed to the configured responsible user Responsible user receives the request in the tasks	(8) Perform responsible user action AS a responsible user Want to provide and mark request as done So, the request can be completed and updated to the final status Acceptance Criteria: Record action in the request history Request does not route to another stage
(9) Select Required device AS a first authorized workflow stage user for request owner	(10) Check device availability AS a system

Want to select the required device type for a preboarding request So, system can reserve the required device Acceptance Criteria: Device type is displayed to the first applicable workflow user Device type is mandatory Once the device selected in the stage, becomes read- only for the subsequent workflow users	Want to check the available quantity of the selected device So, system can determine whether the device should be reserved or not Acceptance Criteria: Availability is checked upon the applicable approval action Check is performed through the inventory warehouse API Available quantity results determine the next action in inventory warehouse
(11) Reserve Available Device AS a system Want to reserve the required device when sufficient inventory is available So, the device is reserved for the related user or logged user based on request without deduction it from actual inventory Acceptance Criteria: Reservation is created when the sufficient inventory is available Reservation is linked to request no. Reservation is linked to HR code of related user (for be-half requests) (if any) (not mandate in this stage) Reservation is linked to HR code of logged user Request status on inventory warehouse become reserved	(12) Create purchasing order AS a system Want to create purchasing order for required unavailable device So, the required device can be provided Acceptance Criteria: Purchasing order is created automatically purchasing order is linked to request no. purchasing order is linked to HR code of related user (for be-half requests) (if any) (not mandate in this stage) purchasing order is linked to HR code of logged user Request status on inventory warehouse become pending procurement
(13) Issue Device AS a system	(14) Release reserved quantity on rejection AS a system Want to release the reserved quantity when the request is rejected So, the reserved quantity becomes available again Acceptance Criteria: System detects an existing reservation Reservation is released through the inventory warehouse API Reject request on the inventory warehouse through the API Quantity becomes available again

تاريخ الانعقاد من	Date	Mandatory Display only when approval category = 2	Accept futures dates only Accept value less than or equal to (تاريخ الانعقاد إلى) field	
تاريخ الانعقاد إلى	Date	Mandatory Display only when approval category = 2	Accept futures dates only Accept value greater than or equal to (تاريخ الانعقاد من) field	
القطاع المسئول	Auto generated	-	Sector that linked by the responsible department	Departments assigned to Sector from "Department setup' screen
الإدارة المسئول	Auto generated	-	Responsible department	Responsible dep. Defined from "Subcategories setup' screen, responsibilities section
تفاصيل	text	Optional	Accepts Arabic & English Alphabet, numbers and symbols (), - /	Max.1000 characters
Upload	Button	Optional Conditional	Opens file explorer to select one PDF or JPG or PNG file only within the max. file size	Mandatory or optional based on the configured for the selected subcategory from "Subcategories setup' screen, Permissions section
اسم الملف	Auto generated	-	Uploaded file name	

Fields				
Name	Type	status	Behavior /Action Performed	
مسح	Button	Appears only after uploading file	Delete the uploaded file Then the upload button will be enabled	
تنزيل	Button	Appears only after uploading file	Download uploaded file	
تسجيل	Button	Fill and validates all mandatory fields	Generate a unique Approval request (sequence last Approval request number + 1) Determine and update the initial status based on the configured permission setup Determine the first responsible user and assign the request to the user If the main category of request = 1, generate DCR code linked to the approval request and document. Generate/begin the internal processing queue Save the Approval request data (creation datetime and user and request details) Send e-mail to the requester with the request info and send e- mail to the assigned for next step Display confirmation msg with the Approval request and configured total SLA.	initial status configured from "Subcategories setup' screen permission section first responsible user is the first row of configured workflow from "Approvals & request workflow setup' screen document owner configured from "Document details' screen
إلغاء	Button	-	Clear entered and selected value	

Business /General rules:

- Logged user shall only be able to view/select active approvals subcategories and categories that they are authorized to submit according to configured setup from "Subcategories setup' screen permission section
- Inactive subcategories shall not be available for submission.
- Responsible department shall be automatically populated based on the configured setup from "Subcategories setup' screen responsibility section
- Responsible sector shall be automatically derived from the responsible department, sector that currently linked to the responsible department from "Department setup' screen
- Attachement requirement shall be determined based on the defined configuration for the selected subcategory from "Subcategories setup' screen permission section
- The upload file shall not exceed the configured maximum attachment size (حجم الوثائق).
- Conditional fields shall be displayed according to the selected approval category

- Upon successful registration, system shall generate a unique approval request number using sequential numbering mechanism (last generated approval request number +1).
- Logged user shall be recorded as the approval request creator.
- Request initial status shall be assigned automatically based on the defined configuration for the selected subcategory from "Subcategories setup' screen permission section.
- the request shall be assigned directly to the first workflow step that defined in approval workflow from "Approvals & request workflow setup' screen.
- For documents management approvals, the configured document owner from "Document details' screen, system shall treat the user as related user.
- System shall determine the department and authorized user(s) for the next stage based on the configured department and Hierarchy
- For stages that have configured Department reference, system shall determine the department as follows:
    - If the configured Department reference for stage is "Logged user', system shall assign request for the selected hierarchy in the request creator department.
    - If the configured Department reference for stage is "Related user', system shall assign request for the selected hierarchy in the department of the selected user (HR code in the submission phase)
    - If the configured Department reference for stage is "Selected/ target dep', system shall assign request for the selected hierarchy in the selected department in related department - الإدارة المرتبطة بالطلبsection
- System shall not allow creating of new approval requests for documents that already have an active request.
- For documents management approvals, shall generate DCR code/ no.
- DCR code is independent from the request no. and shall be used only for document change tracking.
- DCR code shall be generated as: DCR/Sector Abbreviation/Department Abbreviation/ sequence/month year
    - DCR (Static part)
    - Sector that linked by the department at request time
    - Document owner department
    - Last DCR sequence +1
    - Month
    - Calendar year (yyyy)

      Example: DCR/HR/OD/01/07-2026

      Example2: DCR/RIS/CR/02/08-2026
- DCR code shall be unique
- The sequence shall restart from 01 at the beginning of each calendar year.
- After successful registration, system shall display a confirmation msg containing the generated approval no. (تم تسجيل الطلب بنجاح رقم الطلبxxx & SLA)
- System shall identify the eligible user(s) of next stage based on the configured workflow (department, job hierarchy)

- For assignee workflow users, if only one eligible user, the system shall display the assign method is direct method
- For assignee workflow users, if more than one eligible user, the system shall display the assign method is pool method and treat request as the pool assign
- For responsible user, direct assigned shall appear immediately to the only responsible user based on configurations that defined from "Assigning –توزيع المهام" screen.
- Pool assigned approval request shall appear to all eligible users whose job title configured from "Subcategories setup" screen, responsibilities section
- Each audit log entry shall include, at minimum:
  - User code
  - Datetime
  - Action performed
  - Device IP address

User stories:

(1) Register approval request
AS a system user
Want to submit an approval request
So, it can be routed through configured approval workflow
Acceptance Criteria:
Only permitted approval subcategories
Mandatory fields are validated
Approval no. generated
Initial status assigned
First responsible user is determined automatically

(2) Submit Document change request (DCR)
AS a system user
Want to submit a DCR
So, document owner reviews it before processing approval workflow
Acceptance Criteria:
DCR code is generated automatically
Request assigned first to the document owner
After document owner action, the request continues the configured workflow

(3) Upload supporting documents
AS a system user
Want to attach supporting file
So, stakeholders have sufficient info to review request
Acceptance Criteria:
Supported file types only
Upload mandatory only if configured
Attachment remains available during the workflow

(4) Automatic workflow routing
AS a system user
Want to automatically assign my request to all required approvals levels
So, no manual routing
Acceptance Criteria:
Assignment follows the preconfigured
Workflow starts from first step
Status update automatically

(5) Generate request no.
AS a system user
Want unique identifier for each request
So, the request can be tracked throughout its lifecycle

Acceptance Criteria:

Each request receives unique number

DCR code use to identify the document only

View submitted Approval requests tab:

Description: This tab allows users to search for and view all Approval requests that have been submitted from logged user side.

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
بحث	text	Optional	Search within the displayed in the grid	
The grid (allows users to change the sorting order by clicking the grid headers) displays the submitted request from the user - default order earliest to oldest				
رقم الطلب	Auto generated	-		
تاريخ التسجيل	Auto generated	-	Approval request's creation datetime DD/MM/YY HH:MM	
فئة الموفقة	Auto generated	-		
الموفقة	Auto generated	-	Current request status	
الحالة	Auto generated	-	Current request status	
عرض	Button	Enabled for each ticket	Retrieve and display the request details in read-only mode "View Approval request details (approval request details tab)' Screen	

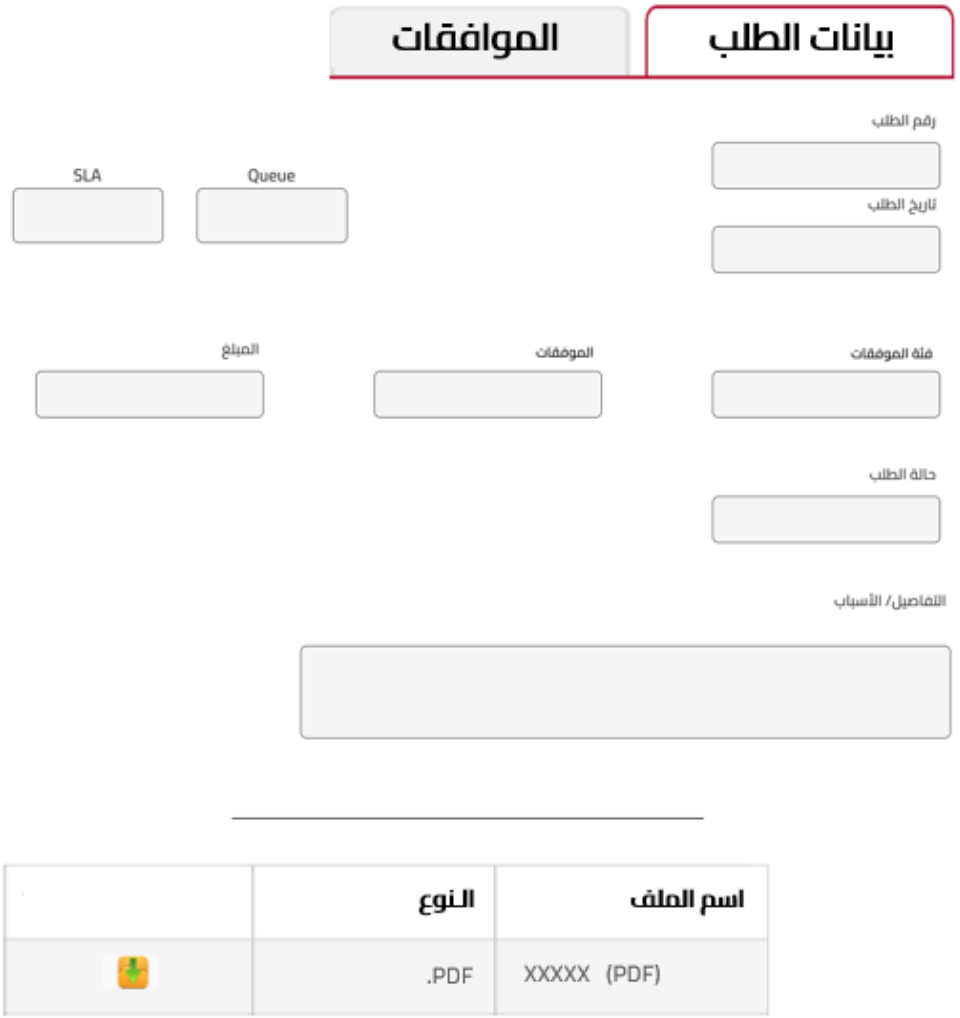

Business /General rules:

- Screen shall display only Approval Requests created by the logged user
- The default grid order shall be by creation datetime, from newest to oldest.
- The status displayed shall always reflect the latest Request status

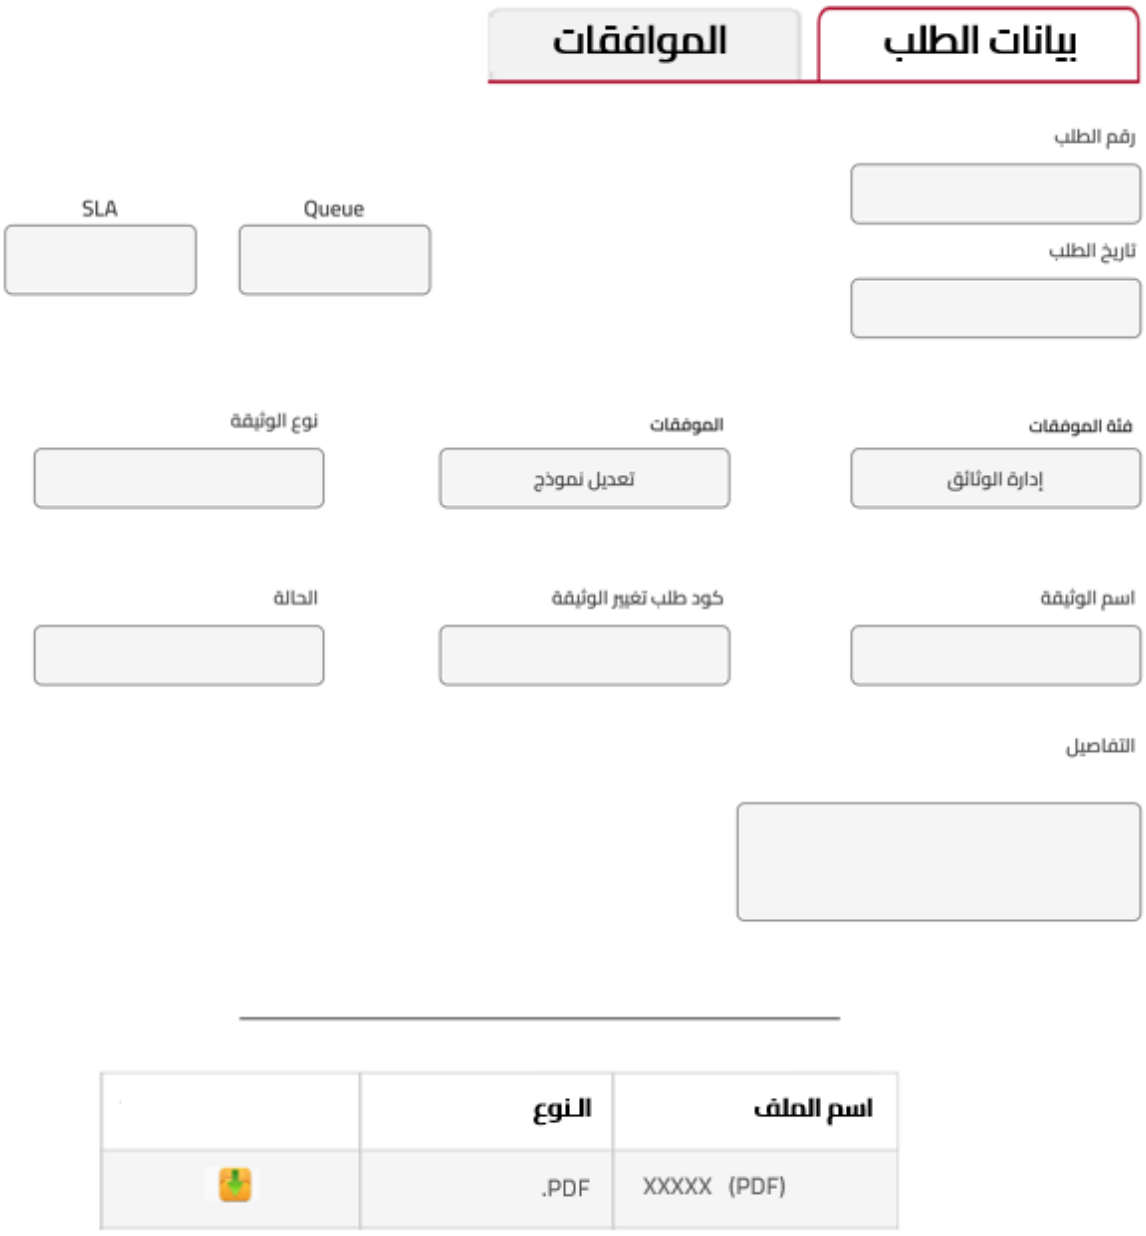

- Users shall be able to sort the grid by clicking the column headers.
- When value is entered in search field, system shall search within:
  - Request number
  - Request Category
  - Request Subcategory
  - Request status

View Approval request details screen:

تاريخ الانعقاد إلى	Auto generated	-	Display only when approval category = 2	
تاريخ الانتهاء	Auto generated	-	Display only when approval category = 1	
اسم الملف	Auto generated	-	Visible only in case there are documents related to ticket document name that Uploaded during ticket registration	
Download	Button	-	Visible only in case there are documents related to ticket Download the selected document	

Tab "الموافقات'

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
The Grid				
تاريخ	Auto generated	-	Submitted action (Approve/ reject) datetime DD/MM/YY HH:MM	
اسم المستخدم	Auto generated	-		
القطاع المسئول	Auto generated	-	Sector that linked by the responsible department	
الإدارة المسئول	Auto generated	-	Responsible department	
الاجراء /القرار	Auto generated	-		
التعليقات	Auto generated	-	Rejection reason	

Business /General rules:

Tab "بيانات الطلب'

- System shall display the request details in read-only mode.
- Conditional request fields shall be displayed based on the main category.

SLA:

- Before SLA starts, system shall display the inline msg – "سيبدأ احتساب الوقت عند بدء معالجة الطلب"

- Before the first user in the flow begins in processing, the SLA countdown field shall display the configured total SLA without starting the countdown.
- Once the user starts processing the request, the SLA shall start/ continue countdown automatically
- Total SLA countdown shall be calculated based on the actual processing time and shall noy be reduced by the time spent waiting for the next workflow assignee to view or claim the request
- When SLA reaches zero, the countdown shall continue displaying overtime in a negative format.
- SLA countdown shall stop when the request reaches the configured Responsibility setup status "Subcategories setup' screen responsibilities section or when the request rejected at any workflow stage.
- Remaining SLA shall be calculated dynamically based on the configured SLA and recorded time taken for each workflow stage
- Total SLA countdown shall be calculated based on the configured working days (vacations setup screen) and working hours only (general setup screen).

QUEUE:

- If the request is assigned to a specific responsible user, the queue no. shall display the current processing order calculated according to the configured queue logic
- If the ticket is still waiting in a pool and has not yet been claimed, current queue no. displays "-'
- While the ticket is unclaimed in a pool, the system shall display inline msg – " سيتم تحديد رقم الدور بعد استلام الطلب من قبل احد المختصين'
- Whenever a ticket is assigned, reassigned, reprioritized, or returned after rejection, the queue shall be recalculated according to configured queue calculation criteria

- Uploaded docs shall be displayed only when docs were uploaded during request registration
- User shall be able to download an available document without modifying the request

Tab "الموافقات'

- Approval tab shall display all actions performed throughout the request workflow.
- Each approval action shall display the action datetime, username who performed the action in his department, the sector that associated to the department, action/ decision and comments or rejection reason
- The Grid shall be displayed in datetime order (from newest to oldest).

User stories:

(1) View request details

AS a request creator

Want to view all info related to my submitted request

So, I can track its current status and progress

Acceptance Criteria:

Only the request creator can access the screen

(2) View total SLA

AS a request creator

Want to know the remaining SLA for my request

So, I can monitor/ know the expected handling time

Acceptance Criteria:

Display remaining total SLA

All displayed info is read-only

Displayed status always reflects the latest status

System shall display all applicable request details based on the selected /request main category

Total SLA shall be calculated based on the configured SLA and applicable working days and hours

Total SLA shall be calculated based on actual processing time

The time spent waiting for the next workflow step shall not be consumed from the total SLA

Countdown shall stop when the request reaches a configured responsible status or when request rejected at any stage

(3) Track request during workflow

AS a request creator

Want to know when my request is waiting for the assignee workflow to begin processing

So, I can understand why the request is not currently being processed

Acceptance Criteria:

System shall stop countdown the SLA, and display inline msg "سيتم استكمال الوقت عند بدأ معالجة الطلب من قبل مسئول المرحلة '

(4) View Queue position

AS a Ticket creator

Want to know the remaining SLA for my ticket

So, I understand its current processing order

Acceptance Criteria:

Display the current queue no. when the request has been assigned

If the request is still waiting in a pool, current queue no. displays "-'

An inline msg informs the creator that the queue no. will appear once request is assigned

(5) View conditional request info

AS a request creator

Want to know/ view the request info applicable to its selected main category

So, I can see all relevant details without unnecessary fields

Acceptance Criteria:

All displayed values shall be read-only

(6) Download supporting docs

AS a request creator

Want to download the doc attached to the request

So, I can review the submitted supporting doc

Acceptance Criteria:

System shall display uploaded doc related to request

Clicking download shall download the selected doc

(7) View workflow processing

AS a request creator

Want to know/ view the actions taken at each workflow step

So, I can follow the progress of my request from submission to completion

Acceptance Criteria:

Display the action performed at each completed workflow step

Display user who performed the action at each completed workflow step

Display the datetime of the performed action

Summitting feedback on Approvals requests:

Approvals requests tab:

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
إجمالي عدد الموفقات	Auto generated	-	Total Count of all open assigned approval requests	
إجمالي عدد الموفقات الجاري حلها	Auto generated	-	Total Count of all open assigned approval requests and SLA countdown begin (user open the approval request)	
The grid (allows users to change the sorting order by clicking the grid headers) displays all assigned tickets to the user and not closed				
بحث	text	Optional	Search within the displayed tickets in the grid	
Queue	Auto generated	-	request queue no.	
رقم الموافقة	Auto generated	-	Approval request no. that generated during registration	
تاريخ التسجيل	Auto generated	-	Approval request for the creation datetime DD/MM/YY HH:MM	
المسمى الوظيفي	Auto generated	-	Display the Requester job title	
القطاع	Auto generated	-	Display the sector linked to current requester department	Departments assigned to Sector from "Department setup' screen
الإدارة	Auto generated	-	Display the Requester department	
المقر	Auto generated	-	Requester Location (HQ/ branches) Display the branch name if the requester associated to branch In case user associated to more than one branch display (---)	

Fields				
Name	Type	status	Behavior /Action Performed	Additional info
فئة الموافقة	Auto generated	-	Display the selected request main category during approval request registration	
الموافقة	Auto generated	-	Display the selected approvals (subcategory) during approval request registration	
الأهمية	Auto generated	-	Display configured priority level	
الحالة	Auto generated	-	Display the latest/current request status	
طريقة التعيين	Auto generated	-	Display configured assignment method (pool/ Direct) for the responsible user / workflow user	assignment method configured from "Subcategories setup' screen Responsibility section for workflow assignee users if only one eligible user, method automatically be direct if only more than one eligible user, method automatically be pool
SLA	Auto generated	-	Before the user starts processing, display the SLA allocated to the current stage (configured % of current stage * total SLA) After user begins/ view display SLA countdown	All SLAs configured from "Approvals & request workflow setup' screen
عرض	Button	Enabled for each request	Retrieve and display the request details in read-only mode in "Summitting feedback' Screen and begin SLA countdown	

Business /General rules:

- Screen shall display only approval requests assigned to logged responsible user based on current stage of request
- User shall not be able to view approval requests assigned to other users
- If no assigned open approval request exit, system shall display "لا يوجد بيانات'
- Search shall be performed only against approval requests displayed in the grid
- When value is entered in search field, system shall search within:
  - approval request number
  - approval Category
  - approval Subcategory
  - Approval request status
  - Sector
  - Titles, etc.

- By default, approval requests shall be order by queue position (ascending)
- Uses unable to change the grid sorting
- System shall retrieve requester location from user defined info "user setup' screen
- If user assigned to a HQ display "المقر الرئيسي'
- If user assigned to a branch display the corresponding branch name
- Queue positions shall be calculated dynamically
- Queue calculation shall consider:
  - approval request Priority
  - approval request Creation datetime
  - Current assigned workload
- Higher Priority requests shall appear before lower priority request that not starts processing yet
- Within the same priority level, older requests shall be before newer approval
- Queue positions shall be recalculated whenever:
  - A new approval request is assigned
  - An approval request is reassigned
  - An approval request is closed
  - approval request Priority changes
- System shall determine the SLA applicable to the current stage based on the SLA % configured to the current stage from "Approvals & request workflow setup' screen.
- System shall calculate the current stage SLA applying as the following: SLA % configured to the current stage * total SLA
- Once the user starts processing (press/click "View' button) the approval request, SLA countdown shall begin
- SLA countdown shall be calculated based on the configured working days (vacations setup screen) and working hours only (general setup screen).
- SLA countdown shall continue until the user submits his action (approve/reject).
- For assignee workflow users, if only one eligible user, the system shall display the assign method is direct method
- For assignee workflow users, if more than one eligible user, the system shall display the assign method is pool method and treat request as the pool assign
- For responsible user, direct assigned shall appear immediately to the only responsible user based on configurations that defined from "Assigning –توزيع المهام ' screen.
- Pool assigned approval request shall appear to all eligible users whose job title configured from "Subcategories setup' screen, responsibilities section
- Once claimed (one of eligible user press/click "View' button), approval request shall disappear from all other pool/tasks users
- approval request for which processing has started (Countdown is running) shall be highlighted using the light red color in the grid
- Each audit log entry shall include, at minimum:

- User code
- Datetime
- Action performed
- Device IP address

User stories:

(1) view Assigned open Approve requests

AS a Responsible user or approval processing workflow user

Want to view all approval requests requiring action from me

So, I can manage my workload

Acceptance Criteria:

Only my assigned approvals are displayed

Closed and not mu assigned stage are excluded

If no approvals exist, "لا يـوجد بيانات" is displayed

All grid fields are read-only

(2) Search for assigned requests

AS a Responsible user or approval processing workflow user

Want to search within my assigned approval requests

So, I can quickly locate a specific ticket

Acceptance Criteria:

Search support:

request no., category, subcategory, status, sector, department, title, etc.

Search results are limited to requests viewed in the grid

(3) Monitor Queue position

AS a Responsible user or approval processing workflow user

Want to view request queue positions

So, I can understand processing order

Acceptance Criteria:

Queue numbers are displayed for assigned requests

Queue is recalculated automatically when workload changes

(4) Monitor SLA

AS a Responsible user or approval processing workflow user

Want to Monitor SLA progress

So, I can handle requests within their target time

Acceptance Criteria:

Applicable current stage is displayed bef. Processing begins (open request)

Countdown starts when processing starts

Remaining SLA is always visible

Countdown be highlighted using the light red color in the grid

(6) Handle pool Requests

AS a Responsible user or approval processing workflow user

Want to claim pool assigned requests

So, I can become responsible for taking the decision

Acceptance Criteria:

Requests pool are visible to all eligible users

First user claiming the request becomes responsible

Request disappears from other pool users

Queue position is assigned after claim

Summitting feedback (Approvals requests):

Summitting feedback dynamic approval

Summitting feedback Static (Document Management) approval

Summitting feedback (Training Management) approval

التعليقات	Auto generated	-	Rejection reason	

Business /General rules:

- If the current stage is not the final workflow stage, the request shall proceed to next configured workflow stage
- System shall determine the department and authorized user(s) for the next stage based on the configured department and Hierarchy
- IF the is more than one authorized user for the next stage, system shall treat the request as pool assignment method
- For stages that have configured Department reference, system shall determine the department as follows:
  - If the configured Department reference for stage is "Logged user', system shall assign request for the selected hierarchy in the request creator department.
  - If the configured Department reference for stage is "Related user', system shall assign request for the selected hierarchy in the department of the selected user
  - If the configured Department reference for stage is "Selected/ target dep', system shall assign request for the selected hierarchy in the selected department in related department - الإدارة المرتبطة بالطلبsection
- If the current stage is the final workflow stage, the request shall be routed to the configured responsible user
- responsible user based on the defined configuration for the selected subcategory from "Subcategories setup' screen responsibilities section

- For documents management approvals, the configured document owner from "Document details' screen, system shall treat the user as related user.
-

Tab "بيانات الطلب'

- System shall display the request details in read-only mode.
- Conditional request fields shall be displayed based on the main category.

SLA:

- Before SLA starts, system shall display the inline msg – "سيبدأ احتساب الوقت عند بدء معالجة الطلب"
- Before the first user in the flow begins in processing, the SLA countdown field shall display the configured total SLA without starting the countdown.
- Once the user starts processing the request, the SLA shall start/ continue countdown automatically
- Total SLA countdown shall be calculated based on the actual processing time and shall noy be reduced by the time spent waiting for the next workflow assignee to view or claim the request
- When SLA reaches zero, the countdown shall continue displaying overtime in a negative format.
- SLA countdown shall stop when the request reaches the configured Responsibility setup status "Subcategories setup' screen responsibilities section or when the request rejected at any workflow stage.
- Remaining SLA shall be calculated dynamically based on the configured SLA and recorded time taken for each workflow stage
- Total SLA countdown shall be calculated based on the configured working days (vacations setup screen) and working hours only (general setup screen).

QUEUE:

- If the request is assigned to a specific responsible user, the queue no. shall display the current processing order calculated according to the configured queue logic
- If the ticket is still waiting in a pool and has not yet been claimed, current queue no. displays "-'
- While the ticket is unclaimed in a pool, the system shall display inline msg – " سيتم تحديد رقم الدور بعد استلام الطلب من قبل احد المختصين'
- Whenever a ticket is assigned, reassigned, reprioritized, or returned after rejection, the queue shall be recalculated according to configured queue calculation criteria

- Uploaded docs shall be displayed only when docs were uploaded during request registration
- User shall be able to download an available document without modifying the request

Tab "الموافقات'

- Approval tab shall display all actions performed throughout the request workflow.

- Each approval action shall display the action datetime, username who performed the action in his department, the sector that associated to the department, action/ decision and comments or rejection reason
- The Grid shall be displayed in datetime order (from newest to oldest).

4.25 Rejected /returned requests:

Description: This screen to view/ display requests that were rejected during the workflow and allows users to return request again to specific previous stage for reprocessing.

Fields

فئة الطلب	Auto generated	-	Display the selected request main category during ticket registration	
الطلب	Auto generated	-	Display the selected issue (subcategory) during request registration	
المرحلة	Auto generated	-	The stage at which the request was rejected	
تاريخ الرفض	Auto generated	-	The date when the request was rejected	Stage action submitted date DD/MM/YY
عرض	Button	-	Retrieve and display the request details in read-only mode "View request details' Screen	
إغلاق	Button	Select one row	Disappear/ remove the selected request from the grid	
إعادة الطلب	Button	Select one row	open return to stage pop-up screen	
Return to stage popup				
المراحل السابقة	Dropdown list	Mandatory	Single selection Only workflow stages that the request has already passed through	
سبب الإعادة	text	Mandatory	Accept Arabic alphabet and numbers	
تسجيل	Button	Fill and validates all mandatory fields	Returns the request to the selected stage and display the entered reason in the "الموفقات' tab - "View request details' Screen	
إلغاء	Button	-	Clear entered and selected value	

Business /General rules:

- Grid shall display requests that were rejected during an active workflow and are eligible for return (not close/ reject from screen before)
- System shall allow only authorized users to return a rejected request to a previous workflow stage
- System shall not allow the user to return the request to a stage that has not previously been completed
- System shall require the user to select only one request from the grid to take an action
- System shall not create a new request when rejected request is returned to previous stage
- Request shall continue through the remaining workflow stages after the returned stage is completed
- System shall continue using the remaining stage SLA of the request and remaining total SLA
- If the request was originally assigned through the pool assignment method, it shall be returned to the same user who previously claimed and handled it

- If the ser who previously claimed and handled it is resigned (مستقيل), system shall return the request to pool method for all eligible users or direct method for new configured users
- When the request is returned to the responsible user, its queue position shall be recalculated logic (priority, current workload)
- When user closes the request, request current status shall not be changed; request only will not be eligible to return anymore
- All actions shall be recorded in the audit log
- Each audit log entry shall include, at minimum:
  - User code
  - Datetime
  - Remaining SLA
  - Action performed
  - Device IP address
